HOUSE OF REPRESENTATIVES  
152nd GENERAL ASSEMBLY

HOUSE BILL NO. 99

AN ACT TO AMEND TITLES 7 AND 29 OF THE DELAWARE CODE RELATING TO CLIMATE CHANGE.

1 WHEREAS, anthropogenic emissions of greenhouse gases are contributing to climate change, threatening  
2 the health and well-being of the people of Delaware and require us to act with urgency; and

3 WHEREAS, the threat that climate change poses is multi-faceted, resulting in severe impacts such as sea  
4 level rise, disruption to the hydrologic cycle, more frequent and intense heatwaves, droughts, and storms; and

5 WHEREAS, Delaware has the lowest mean elevation of any state in the nation and the State is  
6 particularly vulnerable to related climate change impacts like sea level rise, flooding, saltwater intrusion into drinking  
7 water, erosion, wetland loss, beach loss, and extreme storm events; and

8 WHEREAS, in 2021, as part of the global effort to limit global warming to 1.5 degrees Celsius, the United  
9 States made a pledge to reduce its greenhouse gas emissions by at least 50% by 2030 and to reach net zero by 2050; and

10 WHEREAS, the General Assembly has previously recognized that the threat posed by climate change  
11 from greenhouse gas emissions demands legislative action and has, for example, passed legislation to respond to the  
12 effects on territorial and aquatic ecosystems, § 6043(a)(2) of Title 7, the importance of renewable energy generation, §  
13 6043(a)(5) of Title 7, the need to allow natural systems, plants, and animals to accommodate or adapt to climate change, §  
14 7507A(a)(10) of Title 7, the importance of efficient renewable energy consumption, § 8051(b)(3) of Title 7, the unique  
15 threat of sea level rise to Delaware's coastal areas and beaches, §§ 6801, 7014(c)(5) of Title 7, and the need to construct  
16 buildings that have net zero energy consumption, § 7602 of Title 16; and

17 WHEREAS, the State's forests, vegetation, and soils play a key role in storing and sequestering carbon and  
18 also contribute to the State's resiliency to the effects of climate change; and

19 WHEREAS, Delaware’s first Climate Action Plan was published by the Department of Natural Resources  
20 and Environmental Control in November 2021, which provides a pathway for the State to reduce greenhouse gas emissions  
21 and increase the State’s resilience to climate change impacts; and

22 WHEREAS, the Climate Action Plan details the need for a just and equitable transition toward a  
23 decarbonized economy that invests in clean energy and ensures quality jobs; and

24 WHEREAS, the Department of Natural Resources and Environmental Control will lead efforts to recommend  
25 strategies and update the Climate Action Plan; and

26 WHEREAS, all State agencies play an important role in preparing Delaware, its economy, and its  
27 infrastructure for the future, and the 2021 Climate Action Plan urges a whole of government approach to addressing  
28 climate change within the State; and

29 WHEREAS, numerous State governmental bodies have a role in ensuring inclusive, coordinated, and  
30 transparent progress on the State’s climate goals; and

31 WHEREAS, significant additional action is necessary to reduce greenhouse gas emissions in the State and  
32 to increase the resilience of the State to the effects of climate change.

33 NOW, THEREFORE:

34 BE IT ENACTED BY THE GENERAL ASSEMBLY OF THE STATE OF DELAWARE:

35 Section 1. Amend Title 7 of the Delaware Code by inserting a new Part X and by making deletions as shown by  
36 strike through and insertions as shown by underline as follows:

37 Part X. Climate Change.

38 Chapter 100. Delaware Climate Change Solutions Act.

39 § 10000. This Act shall be known as the “Delaware Climate Change Solutions Act of 2023”.

40 § 10001. Legislative Purpose.

41 (a) The General Assembly finds all of the following:

42 (1) Anthropogenic emissions of greenhouse gases are contributing to climate change and have caused global  
43 temperatures to rise by approximately 1 degree Celsius above preindustrial levels.

44 (2) Climate change threatens the health and well-being of the people of Delaware, particularly Delawareans  
45 residing in historically over-burdened and under-served communities, and results in severe impacts such as sea level  
46 rise, increasing temperatures and changes to precipitation patterns. Climate change will also intensify and increase the  
47 frequency of extreme weather events, such as coastal storm surges, flooding, and heat waves.

48           (3) The threat that climate change poses to Delaware is multi-faceted, resulting in disruptions and damage to  
49 the State’s agriculture industry, water resources, built infrastructure, natural resources, and public health.

50           (4) Delaware has the lowest mean elevation of any state in the nation and is therefore particularly vulnerable  
51 to coastal climate change impacts, including sea level rise, flooding, saltwater intrusion into drinking water and  
52 agricultural lands, erosion, wetland loss, beach loss, and extreme storm events.

53           (5) Delaware’s economy and public safety are dependent on transportation, water, and energy infrastructure  
54 systems that must be adaptive to current and future climate change.

55           (6) Climate change poses risks to Delaware’s continued economic vitality, including an industrial center and  
56 major port located on the Delaware River, subject to flooding and storm surge; a tourism economy on the Atlantic  
57 beach communities exposed to sea level rise, flooding, and storm impacts; and a robust agriculture sector vulnerable to  
58 weather extremes, flooding, and saltwater intrusion.

59           (7) The continued health and quality of life of Delaware’s residents are dependent upon reducing its emissions  
60 of greenhouse gases and maintaining and improving the State’s resiliency to the impacts of climate change.

61           (8) Actions taken to reduce greenhouse gas emissions and increase resiliency to climate change have co-  
62 benefits to economic development, job opportunities, public health and air and water quality.

63           (b) Based on its findings in subsection (a) of this section, the General Assembly determines that it is in the public  
64 interest to develop a comprehensive approach to reduce emissions of greenhouse gases in the State and to maximize the  
65 State’s adaptation and resiliency to the effects of climate change.

66           § 10002. Definitions.

67           For purposes of this chapter, the following terms shall have the meanings set forth herein.

68           (1) “2005 Baseline” means the 2005 statewide greenhouse gas emissions, as determined by the Department’s  
69 Division of Air Quality.

70           (2) “2030 Target” means the greenhouse gas emissions reduction requirement set forth in § 10003(a) of this  
71 chapter.

72           (3) “2050 Target” means the greenhouse gas emissions reduction requirement set forth in § 10003(b) of this  
73 chapter.

74           (4) “Carbon dioxide equivalent” means a metric used to quantify greenhouse gas emissions, measured in  
75 metric tons, which accounts for the relative global warming potential of different kinds of greenhouse gases.

76           (5) “Chief Climate Change Officer” means the Director of the Division of Climate, Coastal and Energy at the  
77 Department of Natural Resources and Environmental Control.

78                   (6) “Climate Action Plan” means Delaware’s Climate Action Plan issued in November 2021, and all updated  
79 Climate Action Plans as required in § 10004 of this chapter.

80                   (7) “Climate Change Officer” means the individuals designated by the Secretary of each of the Key Cabinet-  
81 Level Departments to coordinate with the Chief Climate Change Officer on the process of implementation of the  
82 strategies identified in the Climate Action Plan, and on the process of updating the Climate Action Plan.

83                   (8) “Delaware’s Greenhouse Gas Inventory” means an annual report that provides a comprehensive  
84 accounting of total statewide greenhouse gas emissions from all man-made sources. The gases covered by the  
85 inventory include carbon dioxide (CO2), methane (CH4), nitrous oxide (N2O), hydrofluorocarbons (HFCs),  
86 perfluorocarbons (PFCs), sulphur hexafluoride (SF6), and nitrogen trifluoride (NF3). The inventory also calculates  
87 carbon dioxide removal from the atmosphere by “sinks,” e.g., through the uptake of carbon and storage in forests,  
88 vegetation, and soils.

89                   (9) “Department” means the Department of Natural Resources and Environmental Control.

90                   (10) “Global warming potential” means an index representing the combined effect of the differing times  
91 greenhouse gases remain in the atmosphere and their relative effectiveness in absorbing outgoing infrared radiation.

92                   (11) “Greenhouse gas” means carbon dioxide (CO2), methane (CH4), nitrous oxide (N2O),  
93 hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), sulphur hexafluoride (SF6), nitrogen trifluoride (NF3), and any  
94 other substance determined by the Department through regulation that is emitted into the air that may be reasonably  
95 anticipated to cause or contribute to anthropogenic climate change.

96                   (12) “Greenhouse gas emissions reduction targets” means the 2030 Target and the 2050 Target.

97                   (13) “Key Cabinet-Level Departments” mean those Departments in State government with the greatest ability  
98 to shape and implement the Climate Action Plan. Those Departments are:

99                   a. Delaware Department of Natural Resources and Environmental Control.

100                   b. Delaware Department of Agriculture.

101                   c. Delaware Department of Health and Social Services.

102                   d. Delaware State Housing Authority.

103                   e. Delaware Office of Management and Budget.

104                   f. Delaware Department of Safety and Homeland Security.

105                   g. Delaware Department of State.

106                   h. Delaware Department of Transportation.

107                   i. Delaware Department of Education.

108           (14) “Net” means that when measuring total annual emissions for purposes of the 2030 Target or the 2050  
109 Target, emissions may be offset by strategies involving land use, land use change, agriculture, forestry, and also by  
110 strategies involving carbon storage or sequestration projects or other mechanisms approved by the Department.

111           (15) “Secretary” means the Secretary of the Department of Natural Resources and Environmental Control.

112           (16) “State agencies” means as defined in § 6902 of Title 29.

113           (17) “Statewide greenhouse gas emissions” means the total annual emissions of greenhouse gases in the state,  
114 measured in metric tons of carbon dioxide equivalent, and includes all emissions of greenhouse gases from all  
115 economic sectors including electric power, transportation, industrial, residential and commercial buildings, agriculture,  
116 waste management, and energy sectors. Statewide greenhouse gas emissions includes emissions from the generation of  
117 electricity delivered to and consumed within the state, regardless of where the electricity is generated.

118           § 10003. Greenhouse Gas Emissions Reductions.

119           (a) The State shall implement greenhouse gas emissions reduction strategies to ensure that, no later than January 1,  
120 2030, Statewide greenhouse gas emissions on a net basis shall be reduced by not less than 50% from a 2005 Baseline (the  
121 “2030 Target”).

122           (b) The State shall implement greenhouse gas emissions reduction strategies to ensure that, no later than January 1,  
123 2050, greenhouse gas emissions in the State shall be stabilized at or below net zero emissions (the “2050 Target”) and shall  
124 not exceed that level thereafter.

125           (c) The greenhouse gas emissions reductions set forth in subsection (a)-(b) shall be implemented by the State  
126 through the process and the principles set forth in § 10004.

127           (d) The State shall develop and implement strategies that maximize the carbon storage and sequestration potential  
128 of forests, vegetation, and soils within the State, which shall be guided by the principles set forth in § 10004(e).

129           (e) The reductions required by subsections (a)-(b) of this section shall be determined by reference to Delaware’s  
130 Greenhouse Gas Inventory prepared by the Department.

131           (f) The Department shall adopt criteria to evaluate offset proposals as provided in § 10002(14) of this title. In  
132 evaluating greenhouse gas emissions offset, the Department shall consider all of the following factors:

133                   1. The extent to which the offset results in a direct and additional reduction of greenhouse gas  
134 emissions,

135                   2. Whether the offset results in an enduring greenhouse gas reduction that is verifiable.

136                   3. Whether the greenhouse gas reduction produced by the offset can be quantified.

137 4. The extent to which the offset will be implemented in or result in environmental benefits to the  
138 State.

139 5. The cost-effectiveness and availability of the offset.

140 6. If the offset has been utilized for the purposes of meeting greenhouse gas emissions goals in any  
141 other jurisdiction it shall not be approved as offsets in Delaware.

142 (g) The Department shall adopt any rules or regulations necessary for implementing the provisions of subsection  
143 (f) of this section prior to considering offsets proposed for the explicit purpose of achieving the greenhouse gas emission  
144 reductions set forth in Section 10003(a) and (b).

145 § 10004. Climate Action Plan.

146 (a) Climate Action Plan as the Ongoing Framework to Meet Targets.

147 The Climate Action Plan shall serve as the framework to guide all State agencies in working towards achievement  
148 of Delaware's 2030 Target and 2050 Target, and, along with the Climate Action Plan Implementation Report required by §  
149 10006(d), shall serve to provide recommendations for any legislation, regulation, or policy changes required to continue to  
150 make progress towards the greenhouse gas emissions reduction targets. The Department, working with the Office of the  
151 Governor, shall be responsible for updating the Climate Action Plan. The Climate Action Plan shall be updated not later  
152 than November 15, 2025 and every 5 years thereafter.

153 (b) Climate Change Officers to Assist in Updating and Implementation.

154 Each Key Cabinet-Level Department shall identify one individual from within such department to serve as a  
155 Climate Change Officer to support achievement of Delaware's 2030 Target and 2050 Target through implementation of the  
156 State's Climate Action Plan. The Department shall appoint one Climate Change Officer and also the Chief Climate Change  
157 Officer. The Climate Change Officers from all Key Cabinet-Level Departments shall meet as a group at least biannually to  
158 assess progress towards meeting the greenhouse gas emissions reduction targets and assess the status of implementation of  
159 legislation, regulations or policies identified in the most recent Climate Action Plan. This meeting shall be chaired by the  
160 Chief Climate Change Officer. Each Climate Change Officer shall:

161 (1) Provide any information needed to evaluate the ongoing implementation of the Climate Action Plan.

162 (2) Provide any information needed to develop all updates to the Climate Action Plan.

163 (3) Work with the Department on the development and drafting of the aspects of the Climate Action Plan that  
164 address risks or opportunities relevant to the Climate Change Officer's Department.

165 (4) Work with the secretary of their Key Cabinet-Level Department to coordinate all input from their  
166 Department upon the Climate Action Plan as it is developed.

167           (5) Provide any data or analysis requested by the Scientific Committee on Climate Scenarios.

168           (6) Obtain and hold any professional certification or professional training relevant to climate change identified  
169 by the Office of the Governor.

170           (c) Assistance from All State Agencies.

171           All other State agencies shall provide any necessary assistance to the Department in the compilation of data or  
172 other information that the Department, or any Climate Change Officer, determines is necessary to update the Climate  
173 Action Plan.

174           (d) Contents of the Climate Action Plan.

175           Each update of the Climate Action Plan shall include:

176           (1) An assessment of existing federal, State, and local greenhouse gas emissions reduction strategies,  
177 including reference to emissions modeling and emissions inventories.

178           (2) An assessment of whether existing federal, State, and local greenhouse gas emissions reduction strategies  
179 are sufficient to meet the State’s greenhouse gas emissions reduction targets.

180           (3) Additional greenhouse gas emissions reduction strategies to be considered for implementation, if existing  
181 federal, State, and local greenhouse gas emissions reduction strategies are not sufficient to meet the State’s greenhouse  
182 gas emissions reduction targets.

183           (4) The Department's recommendations for legislative, regulatory, and policy changes necessary for the State  
184 to meet its greenhouse gas emissions reduction targets, on topics including but not limited to renewable energy, energy  
185 efficiency, transportation, industrial pollutants, and land use.

186           (5) A discussion of changes in the State’s current and future vulnerability to climate change risks from the  
187 prior update of the Climate Action Plan, including but not limited to impacts to human health, infrastructure,  
188 agriculture, water resources, and natural resources. Such discussion shall reference the most recent climate change  
189 planning scenarios issued by the Scientific Committee on Climate Scenarios.

190           (6) An assessment of whether existing federal, State, and local resilience strategies are sufficient to address  
191 the State’s current and future vulnerability to climate change risks.

192           (7) Proposed additional resilience strategies, if existing federal, State, and local resilience strategies are not  
193 sufficient to address either the State’s current or future vulnerability to climate change risks.

194           (8) Proposed guidance to ensure equity in implementation of the Climate Action Plan.

195           (e) Principles for Development of Reduction Strategies:

196           Each Climate Action Plan shall, to the extent practicable, reflect climate reduction strategies that:

197 (1) Are equitable, seek to minimize costs and maximize the total benefits to the State, and encourage early  
198 action to reduce greenhouse gas emissions and increase resiliency.

199 (2) Do not disproportionately impact over-burdened and under-served communities.

200 (3) Complement efforts to achieve and maintain federal and State ambient air quality standards and  
201 complements efforts to reduce emissions of air toxics.

202 (4) Consider overall societal benefits, including reductions in other air pollutants, diversification of energy  
203 sources, and other benefits to the economy, environment, and public health.

204 (5) Seek to minimize the administrative burden of implementation upon the agency and the burden of  
205 compliance upon the regulated community.

206 (6) Maintain an adequate and reliable energy supply for Delaware, including preparing for fluctuations in  
207 energy demand due to climate change.

208 (f) Process of Plan Development.

209 In preparing each update to the Climate Action Plan, the Department shall:

210 (1) Consider the current scientific understanding of climate change, current data on statewide greenhouse gas  
211 emissions, and the sea level rise scenarios, heat scenarios, and precipitation scenarios developed by the Scientific  
212 Committee on Climate Scenarios.

213 (2) Consider provisions to ensure equitable implementation of greenhouse gas reduction measures and  
214 adaptation and resiliency measures.

215 (3) Allow for opportunities for public input and engagement in the development of the Climate Action Plan,  
216 including strategies that seek input from overburden and under resourced communities. The input and engagement  
217 process should be consistent with the Climate Action Plan Public Participation process as publicly posted by the  
218 Department, including public workshops, public comment, and technical stakeholder engagement. The Department  
219 shall, at least annually, hold a public meeting to provide an update on progress on implementation of the Climate  
220 Action Plan and to receive public input. All public meetings must be held in compliance with § 10004 of Title 29.

221 (g) Presentation of the Climate Action Plan.

222 Each updated Climate Action Plan shall be presented to the General Assembly by providing it to the Chief Clerk  
223 of the House of Representatives, the Secretary of the Senate, the Director and the Librarian of the Division of Research of  
224 Legislative Council.

225 § 10005. Scientific Committee on Climate Scenarios.

226 (a) A Scientific Committee on Climate Scenarios is established and shall serve in an advisory capacity to the  
227 Department. The size and membership of the Scientific Committee shall be determined by the Secretary and may, at the  
228 discretion of the Secretary, include Department staff, external experts, and members of the public.

229 (b) The Scientific Committee's responsibilities shall include:

230 (1) Evaluating and updating the State's sea level rise scenarios. The Scientific Committee shall issue updated  
231 sea level rise scenarios by November 15, 2024 and shall evaluate and update those scenarios not less than every 5 years  
232 thereafter.

233 (2) Evaluating, preparing and updating temperature scenarios for the State. The Scientific Committee shall  
234 issue initial temperature scenarios by November 15, 2024 and shall evaluate and update those scenarios not less than  
235 every 5 years thereafter.

236 (3) Evaluating, preparing and updating precipitation scenarios for the State. The Scientific Committee shall  
237 issue initial precipitation scenarios by November 15, 2024 and shall evaluate and update those scenarios not less than  
238 every 5 years thereafter.

239 § 10006. All of Government Implementation.

240 (a) Implementation Process. The State shall work to implement the Climate Action Plan on an ongoing basis, in an  
241 inclusive, coordinated, and transparent manner. The State shall coordinate the strategy to achieve the State's greenhouse gas  
242 reduction targets through regular updates of the Climate Action Plan, through the Department and the Climate Change  
243 Officers working to implement that Plan, including working to secure any legislation necessary to meet the State's  
244 greenhouse gas emissions reduction targets, and through the implementation strategies identified below.

245 (b) Agency Regulations.

246 (1) When promulgating or amending regulations within the agency's statutory authority, all State agencies  
247 shall consider and, to the extent practicable, incorporate the State's greenhouse gas emissions reduction targets, the  
248 Climate Action Plan, and sea level rise, temperature, and precipitation scenarios as provided for in § 10005(b) of this  
249 title.

250 (2) This subsection (b) does not independently confer statutory authority to State agencies to promulgate or  
251 amend regulations, but instead directs State agencies to consider and, to the extent practicable, incorporate the State's  
252 greenhouse gas emissions reduction targets, Climate Action Plan, sea level rise scenarios, temperature scenarios, and  
253 precipitation scenarios in their promulgation and amendment of regulations.

254 (3) Any regulations promulgated by agencies to meet the targets set for this in this chapter should be  
255 consistent with the goals of the Climate Action Plan or any other applicable law.

256 (c) Agency Planning, Procurement and Resources.

257 (1) Notwithstanding any other statute, all State agencies, in any decision with respect to the purchase and use  
258 of equipment and goods; the siting, construction, and maintenance of State buildings; the assignment of agency  
259 personnel; the planning, design, and operation of State infrastructure; and the issuance of grants and funding for any of  
260 the foregoing, shall consider the State's greenhouse gas emissions reduction targets, and may also consider:

261 a. the Legislative Findings set forth in § 10001(a)-(b) of this Chapter.

262 b. the State's most recent Climate Action Plan.

263 c. the need to increase resilience to climate change, including by reference to the most recent, if any, sea  
264 level rise scenarios, temperature scenarios, and precipitation scenarios, where applicable.

265 (2) All State agencies shall, wherever practicable, procure products and services that have lower greenhouse  
266 gas emissions. This obligation shall apply only when such products and services represent the best value to the State,  
267 are readily available, and perform to satisfactory standards. In determining the best value to the State, State agencies  
268 may consider the total cost of ownership of products and services, including all costs associated with the production,  
269 purchase, transportation, use, operation and disposal of such products or services.

270 (d) Climate Action Plan Implementation Report.

271 (1) The Department, working with the Office of the Governor, shall provide a Climate Action Plan  
272 Implementation Report by January 1, 2024, and thereafter shall provide this Implementation Report to the Legislature  
273 every 2 years. Each Implementation Report shall summarize the State's progress on the strategies outlined in the most  
274 recent Climate Action Plan, and shall summarize, at minimum, the following:

275 a. Activities taken by State agencies to reduce greenhouse gas emissions and, when such data are  
276 available, estimated greenhouse gas emissions reductions, by sector, for the reporting period.

277 b. An update upon the status of the implementation of specific policy measures, specific regulatory  
278 actions, or specific legislative proposals that were recommended in the most recent Climate Action Plan.

279 c. Activities taken by agencies to increase resiliency to climate change.

280 (2) All State agencies shall provide any requested assistance to the Department in the compilation of data or  
281 other information that the Department determines is necessary in the preparation of the Implementation Report.

282 Section 2. Amend § 8053, Title 29 of the Delaware Code by making deletions as shown by strike through and  
283 insertions as shown by underline as follows and by redesignating accordingly:

284 § 8053. State Energy Office; State Energy Coordinator; establishment; powers and duties.

285 (a) There is hereby established the State Energy Office within the Department of Natural Resources and  
286 Environmental Control, ~~Office of the Secretary~~ Division of Climate, Coastal and Energy.

287 (b) The Director of the Division of ~~Energy and Climate~~ Climate, Coastal and Energy is the administrator and head  
288 of the State Energy Office and is the State Energy Coordinator, who shall:

289 (1) Be qualified by training or experience to perform the duties of the Office; and

290 (2) Perform such functions in the administration of the State Energy Office as the Secretary of the Department  
291 of Natural Resources and Environmental Control may from time to time require.

292 (c) The State Energy Office shall:

293 (7) ~~Facilitate the development of~~ Develop and update every 5 years a comprehensive State Energy Plan  
294 designed to protect the health, safety and welfare of the citizens and economy of the State State, consistent with the  
295 State's greenhouse gas emissions reduction targets, as specified in § 10003 of Title 7, and the State's Climate Action  
296 Plan issued pursuant to § 10004 of Title 7, and which shall include, but not be limited to: include:

297 a. Encouraging and promoting conservation of energy through reducing wasteful, uneconomical or  
298 inefficient uses of energy;

299 b. Encouraging and promoting the use of renewable electric generation facilities and alternate energy  
300 technologies by residential and commercial consumers; and

301 c. Encouraging and promoting such other energy efficiencies and conservation goals, methods, standards,  
302 training, programs and policies that are consistent with the intent of this subchapter, especially those directed  
303 toward improving end-use efficiency among the State's energy consumers.

304 Section 3. Amend § 10118, Title 29 of the Delaware Code by making deletions as shown by strike through and  
305 insertions as shown by underline as follows and by redesignating accordingly:

306 § 10118. Agency findings; form of regulations.

307 (b) At the conclusion of all hearings and after receipt within the time allowed of all written materials, upon all the  
308 testimonial and written evidence and information submitted, together with summaries of the evidence and information by  
309 subordinates, the agency shall determine whether a regulation should be adopted, amended or repealed and shall issue its  
310 conclusion in an order which shall include:

311 (3) A brief narrative assessment of the impact, if any, of the regulation on the achievement of the State's  
312 greenhouse gas emissions reduction targets, as specified in § 10003 of Title 7, and the impact of the regulation on the  
313 State's resiliency to climate change, or a statement that any such impact will be de minimis or that such assessment it is  
314 not practical for the regulation. If prepared, the narrative assessment should include a brief description of the agency's

315 efforts to consider climate change, resiliency, and the State's greenhouse gas emissions reduction targets in developing  
316 the regulation.

#### SYNOPSIS

This Act, known as the Delaware Climate Change Solutions Act of 2023, follows the issuance of Delaware's Climate Action Plan in 2021, and establishes a statutory target of greenhouse gas emissions reductions over the medium and long term to mitigate the adverse effects of climate change due to anthropogenic greenhouse gas emissions on the State. The Act establishes a process of regular updates to the Climate Action Plan to serve as the framework to achieve the targeted emissions reductions and develop resilience strategies for the State, creates Climate Change Officers in certain Key Cabinet-Level Departments who will assist DNREC in the ongoing implementation of the Climate Action Plan, requires State agencies to consider climate change in decision-making, rulemaking, and procurement, and requires an Implementation Report every 2 years on the progress of the State towards meeting the statutory targets.
